About this app

Official journal of the American Association of Endodontists.

JOE: Journal of Endodontics
Official journal of the American Association of Endodontists (AAE)

It just got a whole lot easier to keep up with the latest scientific articles and research in endodontic treatments. The JOE app brings you the convenience of reading your favorite journal from anywhere in the world with just a tap. Now available for android smartphones and tablets!

- Stay ahead with alerts when new issues are available and read Articles in Press throughout the month
 - Experience innovative digital content with the newly introduced Article enhancements; featuring AudioSlides, Virtual Microscope, 3D Radiological Viewer, 3D Neuroimaging Viewer, and more.
 - Get access to the journal content on the app via your institution's IP
 - Enjoy Open Access and Open Archive Content without having to login
 - Accessibility support to assist the visually impaired
 - Interact with figures, tables, and supplementary content
 - Stream multimedia for faster viewing or download for later
 - Take notes, highlight articles and share via email and social media
 - Personalize your experience with My Reading List and save articles for offline reading
- Journal Subscribers: Log in with the same username and

About JOE: Journal of Endodontics

The Journal of Endodontics, the official journal of the American Association of Endodontists, publishes scientific articles, case reports and comparison studies evaluating materials and methods of pulp conservation and endodontic treatment. Endodontists and general dentists can learn about new concepts in root canal treatment and the latest advances in techniques and instrumentation in the one journal that helps them keep pace with rapid changes in this field.

BoneBox™ - Dental ...

Details

About this app

BoneBox™ - Dental Lite is a beautiful high resolution dental anatomy tool.

BoneBox™ - Dental Lite is the pocket-sized version of our BoneBox™ - Dental app. This real-time 3D medical education and patient communication tool, featuring incredibly detailed anatomical models of the human dental anatomy. It is a member of a series of apps developed by a team of anatomists, certified medical illustrators, animators, and programmers using actual human CT imaging data, and the most accurate 3D modeling technology available.

The BoneBox™ - Dental Lite is appropriate for use by secondary students, undergraduate and graduate

BoneBox™ - Dental ...

Details

appropriate for use by secondary students, undergraduate and graduate students, and medical professionals.

Interaction with BoneBox™ - Dental Lite utilizes true real-time 3D so the user can place the highly realistic detailed dental anatomy in any position and zoom in to explore all of the anatomical structures. By using the interactive quizzing feature the user will be tested on their knowledge of the human dental anatomy. The user is presented with a random tooth and given 4 multiple choice answers to pick from.

DENTAL TRAUMA

International Association of Dental Traumatology

DENTAL TRAUMA GUIDELINES

Revised 2012

CONTENT:

Section 1. Fractures and luxations of permanent teeth

Section 2. Avulsion of permanent teeth

Section 3. Traumatic injuries to primary teeth

Disclaimer: These guidelines are intended to provide information for health care providers caring for patients with dental injuries. They represent the current best evidence based on literature research and professional opinion. As is true for all guidelines, the health care provider must apply clinical judgment dictated by the conditions present in the given traumatic situation. The IADT does not guarantee favorable outcomes from following the Guidelines, but using the recommended procedures can maximize the chances of success.

THESE GUIDELINES ARE ENDORSED BY THE AMERICAN ASSOCIATION OF ENDODONTISTS

INTRODUCTION

Traumatic dental injuries (TDIs) occur frequently in children and young adults, comprising 5% of all injuries. Twenty-five percent of all school children experience dental trauma and 33% of adults have experienced trauma to the permanent dentition, with the majority of the injuries occurring before age 19. Luxation injuries are the most common TDIs in the primary dentition, whereas crown fractures are more commonly reported for the permanent teeth. Proper diagnosis, treatment planning and follow-up are important to assure a favorable outcome.

This update includes a review of the current dental literature using EMBASE, MEDLINE, PUBMED and Scopes searches from 1996-2011, as well as a search of Dental Traumatology from 2000-2011.

The goal of these guidelines is to provide information for the immediate and urgent care of TDIs. It is understood that some of the subsequent treatment may require secondary and tertiary
