abnormal, excessive, unwanted, unregulated growth of cells which continue to proliferate even after the removal of the causative stimulus

Cancer has four distinct characteristics

Clonality: Refers to genetic changes occurring in a single cell which proliferate to form a clone of malignant cells.

Autonomy: Growth of the cells is not regulated by normal physical and biochemical influences in the environment.

Anaplasia: Refers to lack of normal and coordinated cell differentiation.

Metastasis: Ability of the cancer cells to have discontinuous growth and dissemination to other distant parts of the body.
